

MATH EMPOWERS³

Choice Boards

Choice Boards are a great way to differentiate your math lessons. Students can choose to earn three-in-a-row or you can challenge students to complete the entire board. All Choice Boards are aligned to your Grab & Go! Differentiated Centers Kit.

K- 5 Math Teaching Resources

Are you looking for some really good math activities aligned with the Common Core State Standards? The website, www.k-5mathteachingresources.com, is a previously shared resource that is also featured in Eric Milou's District demonstration lesson. All activities can be used in a small/whole class setting or as a math center. The files are in PDF format and many are "ready to go" resources.

Do You Give a KAHOOT About Math?

Go to getkahoot.com and check out the Kahoot games teachers already made! You can use them as is, or duplicate them so you can modify questions or answers to tailor to your class. Teachers LOVE the instant feedback and reports. Kids LOVE the game show style. Try creating a new KAHOOT with 2 quick questions to use for your formative assessment. Use the "report" list to form your small groups according to their responses.

If you're not quite sure if this is for you... or if you just can't wait to see more, click for a YouTube video called:

Simplifying a Teacher's Life: Free Technology Tools for Assessment

Can Tweeting Help Your Teaching?

The following article from NEA www.nea.org/home/32641.htm discusses how Twitter just might make your job a little more fun and easier. Each newsletter you are invited to share the wonderful things you are doing in your classroom. Instead, how about asking your colleagues to follow you on Twitter? If you love to tweet the mathematical moments in your classroom, please respond with your Twitter information to be shared on the next

3rd Grade Math Empowers newsletter!
